

QNAP

TL-R1200PES-RP TL-R1600PES-RP TL-R2400PES-RP

PB-scale with cascade PCIe JBOD
/ Expansion card series
for enterprise QNAP NAS

QXP-3X8PES
expansion card

QXP-3X4PES
expansion card

CAB-PCIE10M-8644-8X
PCIe JBOD special cable
(For QXP-3X8PES only)

CAB-PCIE10M-8644-4X
PCIe JBOD special cable

TL-R1200PES-RP, TL-R1600PES-RP TL-R2400PES-RP petabyte-scale storage

PB
Scale

PB-scale solutions

SATA HDD (22 TB Each) with 12 units in series for a total capacity of 4 PB

Bandwidth up to 64 Gb/s

With the QXP-3X8PES expansion card, the bandwidth can reach up to 64 Gb/s, making data transfer much faster

Host-based power management

JBOD power status is linked with the host NAS, which helps to reduce hardware management tasks for IT staff.

Maximum 12 JBODs supported

A single NAS can support up to 12 TL PES SATA JBOD units (depending on the NAS platform and the number of PCIe slots, please refer to the NAS/JBOD compatibility list)

Support up to 288 SATA drives

12 x TL-R2400PES-RP JBOD can support up to 288 cost-effective (SATA) disks

HOT
SWAP

Hot-swappable functionality for easy migration

In addition to supporting hot-swappable hard drives, JBOD hot-swappable is also provided, making it faster for IT personnel to migrate large amounts of data between NAS models

Budget-conscious 1PB space?

Private on-premise cloud v.s. public cloud

AWS S3 public cloud storage cost is calculated based on the western US region with 1 petabyte (uploading 85 TB per month) which costs about US\$25,500, and you need to pay separately for removing data. QNAP has launched the new TL PCIe Interface SATA JBOD, which uses 2 x TL-R2400PES JBOD, 1 x QXP-3X8PES expansion card and 46 x 22TB hard drives, with a total cost of only \$24,500. Buying the NAS with JBOD can provide significant cost saving in the long run.

	Private cloud expansion	Public cloud augmentation
Control	Take full control	Partial control
Sensitive data security	Higher	Could be lower
Hardware required	Necessary	Unnecessary
Configuration	Customize	Preset configurations
Scalability	limited	Higher
Performance	Higher	Lower
1PB cost	low	Ignore (does not include cost of reading data)

Add additional PB storage for QNAP all-flash NAS models

Enterprise - All-Flash
NAS series

Rack-mounted PCIe JBOD series
TL-R1200PES-RP, TL-R1600PES-RP, TL-R2400PES-RP

As enterprises set up QNAP's high-speed, all-flash NAS storage devices, IT can expand the QNAP PCIe JBOD series to reach up to 4 petabytes of storage capacity whenever the company grows with more storage need.

To find out what NAS models that are compatible with PCIe JBOD, refer to the compatibility list below
<https://www.qnap.com/go/compatibility-expansion/pcie>

Expand NAS capacity with TL PCIe JBOD, total up to **288** disks, and **4 PB** capacity

12 x TL-R2400PES-RP
PCIe JBOD

288 x 22TB
3.5-inch SATA HDD

Note: For details about the number of NAS systems supported, see Compatibility List
<https://www.qnap.com/go/compatibility-expansion/pcie>

QNAP all-flash NAS supports the new TL PCIe JBOD for additional petabyte capacity

[Purchase accessories] Dual-port PCIe expansion cards QXP-3X8PES, QXP-3X4PES & connection cables CAB-PCIE10M-8644-4X, CAB-PCIE10M-8644-8X

The new high-speed dual-port PCIe expansion card with 8X/4X special cable supports TL-R1200PES-RP, TL-R1600PES-RP, and TL-R2400PES-RP PCIe JBOD series, providing up to 64Gb/s bandwidth support for QNAP-compatible NAS. **Please note that the JBOD unit does not include an expansion card; it only contains an 8X connection cable. The expansion card and 4X connection cable must be purchased separately.** Please refer to the PCIe JBOD compatible list for selection.

QXP-3X8PES expansion card
(Optional)

CAB-PCIE10M-8644-8X
PCIe JBOD special cable (For QXP-3X8PES
only, JBOD package contains 1 cable)

QXP-3X4PES expansion card
(Optional)

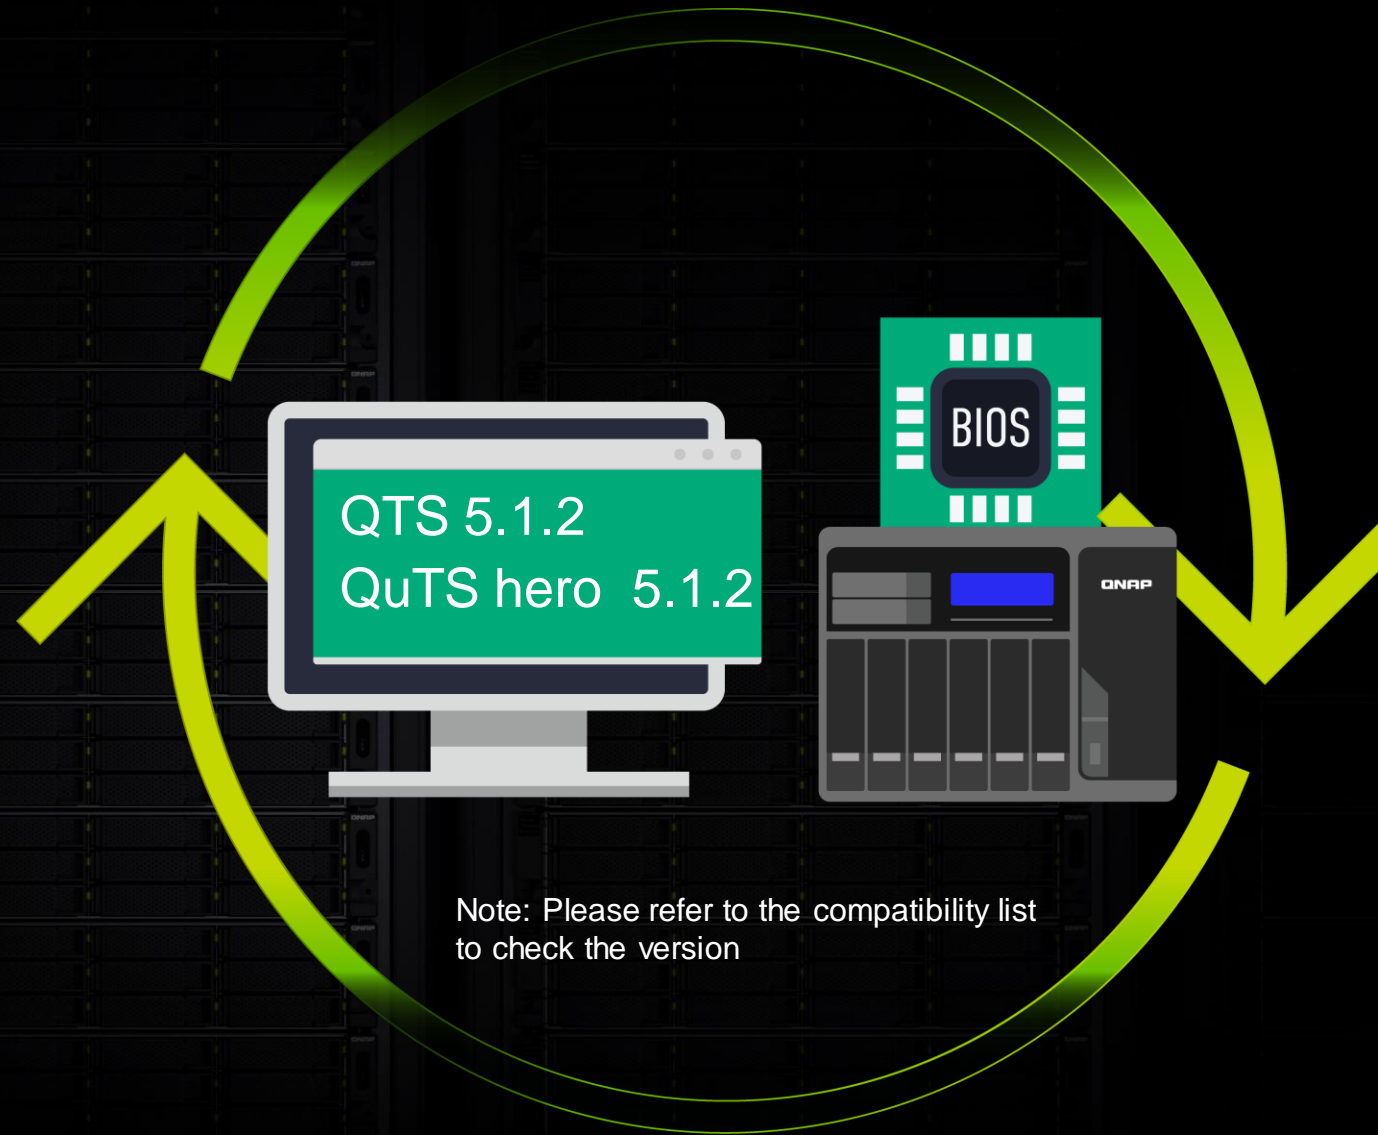

CAB-PCIE10M-8644-4X
PCIe JBOD special cable
(Optional)

The NAS operating system must be QuTS hero h5.1.2 / QTS 5.1.2 or higher, and the BIOS may be required for an update.

Please check the compatible list first and update your NAS QTS/QuTS hero version and BIOS firmware. For more details, refer to the compatibility list.

Compatibility: <https://www.qnap.com/go/compatibility-expansion/pcie>

Note: Please refer to the compatibility list to check the version

NAS TS-h2490FU + 3 x QXP-3X4PES cards connecting 12 x TL-R1200PES-RP

For the difference in the number of supported units, check the compatibility list.
<https://www.qnap.com/go/compatibility-expansion/pcie>

TL-R1200PES-RP & TL-R1600PES-RP short-depth 37-cm / 14.6-inch design

Different from the typical 2U/3U rackmount JBODs that are over 60 cm deep and heavy, the QNAP PCIe JBOD series has a 30% smaller and lightweight design, making it the top choice for business users with redundant power design.

The volume is significantly reduced by 30%, which can save transportation costs.

The 37cm / 14.6-inch short-depth chassis is designed to be lightweight and friendly for setting up.

The hot-swappable function makes it easier for IT to migrate large-capacity JBODs

When NAS transmits a large number of files or a single large amount of data over a network, it not only takes a long time to transfer but also occupies a lot of bandwidth, resulting in reduced work efficiency. The TL-R1200PES-RP, TL-R1600PES-RP, and TL-R2400PES-RP support hot-swappable data migration: just install the QXP-3X4PES or QXP-3X8PES on another NAS B, safely uninstall the JBOD from NAS A, and then arrange the migration, transport the JBOD to another location, and then connect and mount it with the NAS.

Host-based power management

When the power outage occurs, usually the expansion JBOD device of NAS will also shut down. When the power is recovered, IT personnel needs to press the power button on-site to restart the expansion JBOD device, making it difficult to restart the JBOD if the server room is at a remote location or during off-work hours. To eliminate the inconvenience of switching on JBODs physically on site, the new QNAP TL PCIe JBODs provide a convenient function that allows the power on/off to be linked to the power status of NAS host, which can be used to turn on the JBOD together when the NAS is restarted after a power recovery.

Expand the NAS storage pool capacity

Expand NAS storage pool: It is a commonly used function for IT personnel to expand the capacity of the NAS. After the NAS correctly identifies the new JBOD, select the storage pool where the JBOD is located in the QTS UI, and then select [Expand Pool] in the action, and follow the steps to get more storage space.

Storage Pool 2 Management

Data Reduction | **Storage Pool** | QSAL

Name/Alias: Storage Pool 2

SSD over-provisioning: 136.92 GB

Status: Ready

RAID Group of Storage Pool 2

Name/Alias	Capacity	Status	RAID Type

 Storage pool expansion allows only the same kinds of disks, SSDs and HDDs cannot be mixed

Live Demo

SAS JBOD data migration: SATA HDDs from SAS JBOD to PCIe SATA JBOD

To migrate the JBOD with SATA HDD expansion on the original NAS from SAS JBOD to SATA JBOD, perform the following steps: 1. Safely detach pool, 2. Normal shutdown, 3. To install the PCIe expansion card, 4. Transferring SATA HDD to PCIe JBOD, 5. Remove SAS JBOD, 6. Boot NAS after connecting the PCIe JBOD, 7. Mount and restore.

Use [Storage & Snapshot] to easily manage JBOD in NAS QTS 5.1.2 / QuTS hero h5.1.2

The TL PCIE JBOD series, the same as the TL SAS JBOD series, can be monitored and managed in NAS [Storage & Snapshot]. Compared with the TR-002/TR-004/TR-004U RAID DAS series, it can support more QTS/QuTS hero local drive management functions.

QTS JBOD & Disk Information

- Disk S.M.A.R.T. info
- Disk performance test
- Locate JBOD
- Attach and Recover Storage Pool
- Safety Detach

Note: Because of the maximum 22TB HDD capacity and the maximum supported JBOD units per NAS, QuTS hero can support up to 4PB pool, QTS can support up to 304TB pool.

The screenshot displays the 'Storage & Snapshots' management interface. The left sidebar shows navigation options: Overview, Storage (selected), Disks/VJBOD, Storage/Snapshots, Cache Acceleration, External Storage, Remote Disk, Topology, Data Protection (Snapshot, Snapshot Replica, Snapshot Vault, SnapSync), iSCSI & Fibre Channel, HybridMount, ZFS Pool Profiling Tool, and VJBOD Cloud. The main content area is titled 'Disks/VJBOD | NAS and Enclosure: 2 | Disks: 17, Unused slots: 5'. It shows a table of disks for the 'TL-R1200PES-RP-N31P' host. The table columns are Slot, Interface, Device, Health Status, Capacity, Status, ULINK DA, Used Type, Manufactu..., and Model. Below the table, there is a 'NAS and Enclosure' section showing details for the 'TL-R1200PES-RP' enclosure, including Enclosure ID, Serial Number, System Temperature, PSU 2 Status, System fan 2 speed, Model Name, Bus Type, PSU 1 Status, and System fan 1 speed.

Expand NAS storage flexibly or as backup space

The TL series JBOD can be used as a QNAP NAS expansion space and can expand the local storage capacity of the NAS. Supports all operations that can be done with normal storage pools, or create a snapshot backup job to back up snapshots of disk blocks and LUNs to TL JBOD.

Based on the software RAID architecture, the TL JBOD series is suitable for fixed expansion devices on the same NAS platform.

Enterprise-ready with a 5-year standard warranty covering hardware and technical support

5-year standard warranty

TL-R1200PES-RP & TL-R1600PES-RP & TL-R2400PES-RP include standard five-year warranty.

QNAP's warranty starts from the product sold

- Repairs under normal use during the warranty period, Replacement parts are free of charge (except consumables and accessories)
