Preface

Welcome to the 2nd Workshop on Natural Language Processing Techniques for Educational Applications (NLP-TEA-2), with a Shared Task on Chinese Grammatical Error Diagnosis (CGED).

The development of Natural Language Processing (NLP) has advanced to a level that affects the research landscape of many academic domains and has practical applications in many industrial sectors. On the other hand, educational environment has also been improved to impact the world society, such as the emergence of MOOCs (Massive Open Online Courses). With these trends, this workshop focuses on the NLP techniques applied to the educational environment. Research issues in this direction have gained more and more attention, examples including the activities like the workshops on Innovative Use of NLP for Building Educational Applications since 2005 and educational data mining conferences since 2008.

This is the second workshop held in the Asian area, with the first one NLP-TEA-1 being held in conjunction with the 22nd International Conference in Computer Education (ICCE 2014) from Nov. 30 to Dec. 4, 2014 in Japan. This year, we continue to promote this research line by holding the workshop in conjunction with the 2015 ACL-IJCNLP conference and also holding the second shared task on Chinese Grammatical Error Diagnosis. During this short period between the first and second workshop, we still receive 14 valid submissions for regular session, each of which was reviewed by three experts, and have 9 teams participating in the shared task, with 6 of them submitting their testing results. In total, there are 6 oral papers and 12 posters accepted. We also organize a keynote speech session from the industrial sector in this workshop.

Overall, we would like to promote this line of research and benefit the participants of the workshop and the shared task.
