I LOVE CHINCHILLAS!

My Pets!

Welcome to the website about my two pets: [Yuna](#) and [Quoll!](#)

Yuna

About Yuna!

She's a Syrian Hamster
She's over two years old!
She's Quoll's best friend!

Yuna, I think, is the fourth hamster I've had. She loves walking upside-down on the ceiling of her cage by hanging on the bars, and I've found out that she will eat food upside-down if I feed her through the bars!

Quoll

Sweeties!

The yummiest scrummiest treats in the world!

This is a website all about different types of sweets 1st of all my favourite sweet is called a daim bar. A thin layer of chocolate and hard, heavenly toffee. Mmmmmmmmm.....

One of the most comon sweets are lollipops. They come in all shapes,sizes,colours and flavors. They are really popular. Most sweet shops have them. So when your out and about get a yummy lollipop!

Bubblegum is a sticky thing you chew and you can blow bubbles with it. Blowing a bubble with gum is quite hard but practice makes perfect! There are so many different colours and flavours but I love sour gum!

GeoCities sites show what normal, non-designer, people will create if given the tools available around the turn of the millennium.

YAHOO! GEOCITIES

Sorry, GeoCities has closed.

The GeoCities service is no longer available, but there's a lot more to explore on Yahoo!

*“It became necessary to destroy
the town to save it.”*

As companies like Yahoo! switch off swatches of our online universe, little fragments of our collective history disappear. They might be ugly and neglected fragments of our history but they're still what got us where we are today.

—Phil Gyford

bruce lawson

@bruce1

Just helped a lady find a mirror of her dead husband's deleted GeoCities site. Sadly, it's not a complete mirror.

These guys found the way to destroy the most massive amount of history in the shortest amount of time with absolutely no recourse.

—Jason Scott

Eric A. Meyer

@meyerweb

We think that history isn't going anywhere, but it's always slipping away, always dying. At best we can rescue fragments, and so we must.

@kissane

The other half of "making" is "taking care of."
We've gotten pretty good at making internet.
Time to get better at caring for what we
make.

In the startup world, you work hard and you move fast in order to make other people rich.

You're a small elite of very smart young people who are working very hard for an even smaller elite of mostly baby-boomer financiers.

WHERE THE **WEB** WAS BORN

In the offices of this corridor, all the fundamental technologies of the World Wide Web were developed.

Started in 1990 from a proposal made by Tim Berners-Lee in 1989, the effort was first divided between an office in building 31 of the Computing and Networking Division (CN) and one in building 2 of the Electronics and Computing for Physics Division (ECP).

In 1991 the team came together in these offices, then belonging to ECP. It was composed of two CERN staff members, Tim Berners-Lee (GB) and Robert Cailliau (BE), aided by a number of Fellows, Technical Students, a Coopérant and Summer Students.

At the end of 1994 Tim Berners-Lee left CERN to direct the World Wide Web Consortium (W3C), a world-wide organization devoted to leading the Web to its full potential. The W3C was founded with the help of CERN, the European Commission, the Massachusetts Institute of Technology (MIT), the Institut National pour la Recherche en Informatique et en Automatique (INRIA), and the Advanced Research Projects Agency (ARPA).

In 1995 Tim Berners-Lee and Robert Cailliau received the ACM Software System Award for the World Wide Web. In 2004, Tim Berners-Lee was awarded the first Millennium Technology Prize by the Finnish Technology Award Foundation.
